REFERENCE

Zoltán Kovács electronics engineer (born on the 09. July 1962. in Szeged, MSc Electronically Engineering) worked at Eybl Hungary Ltd. (H-9545 Jánosháza, Jókai u. 4.) from 2007 November to 2008 September as Leader Engineering.

During that time he was responsible to lead the introduction of Lean Manufacturing (One Piece Flow) and support implementing Toyota production system, starting in the plant in Nagykanizsa, later on all other plants in Hungary. He is well practiced in leading the realisation and adapting 5S requirements in the production. He leaded the Visualisation Project in Lenti as a Pilotproject for hungarian Plants.
Also in Lenti he was responsible for the reorganisation and leading of the Maintenance team.
He joined and instruct from technical side the decision team by selecting special machines as profilautomat.

His engineering and leadership work required good engineering background in Lean Manufacturing and Kaizen as well cooperation and coordination skills. His knowledge of advanced level German and English is also key for daily job and cooperation with internal and external partners.

His daily job contains the control and development of production, Layout changes, 5S activities. His contract was canceled by Eybl, based on rationalisation inside of the Eybl Co through centralisation the engineering in the headquarter.

Based on his background and mentality I belive he can supervise and/or lead an engineering or production organisation focusing on quality, efficiency and cost.

Date: Jánosháza, September 1, 2008.
